

# Temperature Solutions

for measurement and control

Temperature is the most widely measured process variable and its measurement is critical in many manufacturing processes.

Sterling represents manufacturers known for their accuracy and reliability. We work with multiple companies so you will have the best option available for your specific application.

Red Lion Controls, Inc. is known for their affordable, reliable panel meters. They've built on that reputation to produce a line of innovative temperature control systems and HMI's.

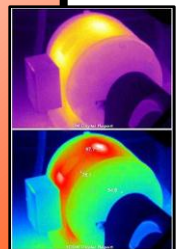

JMS provides high quality standard and custom temperature sensors including thermocouples, RTD's and thermowells as well as a wide selection of temperature accessories. JMS offers many extras to serve our customers including the 24 hour Swifty Sensor Service (at no extra charge), our new calibration program that complies with ISO 9000 / OSHA PM 1910 and is NIST traceable, and the Rolling Purchase Order Program for special volume and OEM discounts.

BriskHeat has been in the heating business since 1949. With freeze protection, condensation prevention, flow/viscosity control and process temperature control, BriskHeat offers the largest selection of hazardous-rated heating solutions.

Process Sensor Corp. has a full line of high performance, infrared temperature sensing products. PSC has experienced application specialists who will provide unique IR sensor solutions for temperature applications.

Sterling Engineering Solutions is a certified woman-owned small business.
